

Telephony made easy with ODT Vision® Voice Response Unit

ODT VISION® for the **I5/iSERIES/AS400** is a revolutionary product that allows two-way telephone access to your **IBM I5/iSERIES/AS400** or **Micro Database**. With **ODT VISION®**, every touch-tone phone in the world becomes a remote terminal on your Data.

Although computer telephony systems have been available for a number of years, these systems have traditionally been expensive and not easily customized. **ODT VISION®** addresses these issues by being the most versatile and inexpensive telephony solution available. Direct connectivity to the host in real time is not even an option for most telephony systems. With **ODT VISION®**, not only is direct I5/iSERIES/AS400 telephony access a reality, but it comes with little or no modifications to your existing host display programs.

How can my company use the **ODT VISION®** System

Customers or sales staff will now be able to place orders, check status, and verify information from remote sites even after hours. Employees can verify benefits, enter payroll information, or check a message board from the road or the comfort of their own homes. Operators or support personnel can be notified of system problems that need immediate attention via phone or beeper. These kinds of functions and many more can be provided 7 days a week, 24 hours a day without the expense of additional personnel.

Customization Made Easy

Your own voice response applications can be created using the script compiler. **ODT VISION®** uses an easy to learn "Basic" - like scripting language allowing you to quickly create your own voice applications from any display screen application from the **iSERIES/AS400** or linked from micro databases.

The **ODT VISION** Software can also be loaded on any PC linked to your **iSERIES/AS400** so development and testing can be done without disrupting the production unit. Outbound voice files can be recorded using a standard Sound Blaster card.

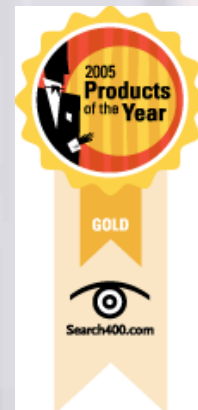

Phone Simulator

Simplifies development and allows user to change and test on second PC without disturbing production unit.

Sample Applications for **ODT VISION®** Telephony for Windows and the IBM iSERIES/AS400

-  Order Entry
-  Password resets
-  Transaction Confirmation
-  Shipping Information
-  Pricing Information
-  Stock Availability
-  Customer Inquiry
-  Available Credit
-  Information Hotline
-  Offsite Payroll Input
-  Employee Benefit Hotline
-  Customer Response
-  Automated System Operator
-  Automated Paging & Email Delivery
-  Fax Back Systems
-  Query Reports On Demand
-  Human Resource Support
-  Warehouse & Logistics Support
-  Automated notification to personnel in field
-  Audit and Log trails of all activities

Affordable Solution

The **ODT VISION®** is a commonsense approach, which provides functionality, flexibility and is easy to support while not being prohibitive in cost. This system allows you to provide information from your current computer system to the outside world on a 24/7 basis..

Hourly cost based on payback period of... 1 yr. 2 yr. 3yr.

4 line iSERIES/AS400 unit	\$1.66	\$0.83	\$0.55
8 line iSERIES/AS400 unit	\$2.11	\$1.05	\$0.70
12 line iSERIES/AS400 unit	\$2.57	\$1.28	\$0.86

Features of the ODT VISION® Voice Response System

ODT VISION® is a Windows based telephony system that allows up to 24 simultaneous I5/iSERIES/AS400 users to access twenty four concurrent sessions per VRU. An unlimited number of ODT VISION® boxes can be used on an I5/iSERIES/AS400.

Validation information used by the **ODT VISION®** system is supplied by your I5/iSERIES/AS400 by reading the information right off of the screens provided by your existing I5iSERIES/AS400 application using IBM Client Access. No modifications to your existing programs are required in most cases. Also, ODT VISION® can use validation data files exported from your I5/iSERIES/AS400 or other database systems.

The ODT VISION® can be linked to Microsoft Access and can import or export validation and transaction files from industry standard file formats that can be used by many Micro, Mid-Range or Mainframe applications. This includes data from the I5SERIES/AS400, dBase, Paradox, MS SQL Server, and flat-ASCII files among others. **ODT VISION®** supports Microsoft's Open Data Base Connectivity (ODBC) standard to allow attachment to existing "industry standard" databases. **Microsoft SAPI 5.1 standards for Text to Speech, TTS is also available as an option.**

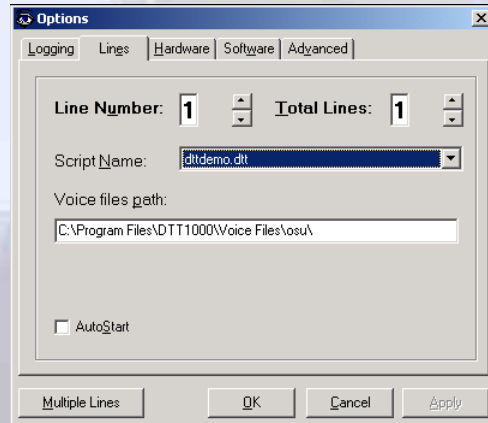

System Monitoring

The **ODT VISION®** provides user interfaces for the setup and monitoring of your telephony applications. There is also a graphical interface, which shows a snapshot of current line usage. This is a helpful tool in the analysis of peak periods and capacity issues. Log files can also be used to show all activity in detail.

Demo Available

The **ODT VISION®** provides a demonstration , which can be downloaded from our web site. Call 614-985-3814 or email at sales@ODTVision.com to learn more. [Web Site www.ODTVision.com](http://www.ODTVision.com)
